Description

This method shows how often each different value in a set of data occurs. They serve to obtain a visual of the distribution of the sample with respect to a characteristic, quantitative and continuous.

Parameters

Plot properties

- *Bindsr*: Histogram is a mapping of bins (intervals) to frequencies. If it is empty the default value is automatic.
- *Histogram Title: Title of the visualization*
- *X Label: Histogram x-axis*
- *Y Label: Histogram y-axis*
- *Save name: Name to save the pdf file.*

- *Histogram Title*: Title of the visualization.

Result

A visualization in pdf format.

Constraints

- The columns should be numeric values.

Implementation

To generate the Dataframe need a pandas library. The final plot is rendered by using Matplot lib.
