July 2022

## Description

Given  $n$  numeric columns, this methods computes the **mean** of that set of numbers.

## Parameters

- *Title*: The title of the graph.
- *Comment*: A comment added at the end of the graph.

## Result

A PDF document with the **mean** of the dataset.

## 1 Constraints

- The dataset must be a **numeric** dataset.

## 2 Implementation

For getting the mean of the dataset we used a **Python Flask application** that gets the data and calculates the mean using the *statistics* package.
