Description

Give 1 numeric columns, this method shows how often each different value in a set of data occurs. They serve to obtain a visual of the distribution of the sample with respect to a characteristic, quantitative and continuous.

Parameters

Plot properties

- *Bindsr*: Histogram is a mapping of bins (intervals) to frequencies. If it is empty the default value is automatic.
- *Histogram Title*: Title of the visualization
- *Column to calculate*: Column to calculate the histogram, only support 1 column.

Result

A visualization in pdf format.

Constraints

- Only Support 1 column.
- The columns should be numeric values.

Implementation

To generate the Dataframe need a pandas library. The final plot is rendered by using Matplot lib.
