July 2022

- **Description:**

With two given numeric columns, the method plots a bar chart of the input data.

- **Parameters:**

Plot parameters:

1. Title of the X axis: The title of the corresponding name of the horizontal Axis.
2. Title of the Y axis: The title of the corresponding name of the vertical Axis.
3. Title of the plot: The title of the plot.
4. Colour of the plot: It exist three possible colour choices for the bars. (Blue, green & red)

- **Result:**

The result is a bar chart of the input data. The advantages of this type of graph in the statistical study is that with a single glance you can quickly make comparisons, generalizations about the data and deduce trends.
