July 2022

Description
Give 2 numeric columns, this method computes the plot corresponding to the linear regression of the data.
Parameters
Plot properties

- Colour : categorical variable to colour the linear regression in the plot. The available colors are red, blue and green.

  Figure properties

- Title: Title of the visualization.

Result
A visualization in pdf format of the final plot.

Constraints

- The columns should be numeric values.

- The program will select the first two selected columns.

Implementation
The linear regression is performed using the seaborn packages. The final graph is generated using the matplotlib package.
